IN THE CLAIMS:

Please cancel claims 1-33.

Please add the following new claims:

A table assembly for supporting a workpiece, said assembly 34. (New)

comprising:

a front rail and a rear rail spaced from one another defining a periphery

therebetween;

a material support supported by said front and rear rails and rotatable between a

material supporting position for supporting the workpiece wherein a portion of said

material support protrudes above said periphery and an unobstructing position wherein

said material support is disposed fully within said periphery.

35. (New) An assembly as set forth in claim 34 further including a material

support lock engaging said material support for maintaining said material support in one

of said material supporting position and said unobstructing supporting position.

36. (New) An assembly as set forth in claim 35 wherein said material support

lock further comprises a locking spring engaging said material support, said locking

spring movable between a compressed position and an uncompressed position such that

said material support is rotatable between said material supporting and unobstructing

positions when said locking spring is in said compressed position.

37. (New) An assembly as set forth in claim 36 further including a material

support stop adjacent said material support to restrict movement of said material support.

38. (New) An assembly as set forth in claim 37 wherein said material support

stop is supported by said rear rail.

39. (New) An assembly as set forth in claim 38 wherein said assembly includes a

plurality of said material supports, a plurality of said material support locks, and a

plurality of said material support stops.

40. (New) An assembly as set forth in claim 39 wherein each of said plurality of

said material supports locks and said material support stops is associated with each of said

plurality of said material supports.

41. (New) An assembly as set forth in claim 34 wherein said table assembly

further includes at least one material guide rotatably connected to one of said rails for

movement between a guiding position to provide material guidance and a quiescent

position to lie flush against said one of said rails.

42. (New) An assembly as set forth in claim 41 further including a material guide

lock engaging said material guide for locking said material guide in said guiding position.

43. (New) An assembly as set forth in claim 42 wherein said material guide lock

further comprises a guide spring engaging said material guide, said guide spring movable

between a compressed position and an uncompressed position such that said material

guide is rotatable when said guide spring is in said compressed position.

44. (New) An assembly as set forth in claim 34 further including a tool pivotally

attached to one of said front rail and said rear rail such that said tool may pivot through a

plane parallel to said periphery.

45. (New) An assembly as set forth in claim 44 wherein one of said front rail and

said rear rail further includes a slide channel for receiving a slide such that said slide

slides along said one of said front rail and said rear rail.

46. (New) An assembly as set forth in claim 45 wherein said slide further

includes a track plate for pivotally connecting said tool to said slide.

47. (New) An assembly as set forth in claim 46 wherein said slide further

includes a slide lock for preventing movement of said slide along said one of said rails to

maintain said tool at a desired angle.
